.AIRPORT.BRIEFING.

3. DEPARTURE

3.3. NOISE ABATEMENT PROCEDURES

Noise abatement procedure shall be applied during climb to reduce the impact of noise on ground while ensuring flight safety.

Follow noise abatement procedure with NADP1.

Use the reduced thrust to take off if ACFT performance permits.

At 3181' (1500') with a climb speed of $V_2 + 10$ KT, reduce engine power/thrust and angle of fuselage/pitch, maintain a positive rate of climb and flaps/slats in the take-off configuration.

Maintain reduced engine power/thrust and positive climb rate. When above 4681' (3000'), accelerate smoothly to enroute climb speed and retract flaps/slats on schedule.

3.4. COMMUNICATION FAILURE PROCEDURES

In case of communication failure due to equipment failure in ATC, contact the previous control unit.

In case of ACFT communication failure:

If radio receiver is available but transmitter is not, follow ATC instruction.

If radio transmitter is available but receiver is not, notify flight intention to ATC immediately, report ACFT position and flight altitude.

In case of communication failure when using radio frequency or emergency frequency, contact Chengdu terminal control office by satellite phone 86-28-61612810, 86-28-61612811.

3.5. OTHER INFORMATION

When departing from RWY 02L, deviation to the West of the upwind course is forbidden without ATC permission.
